

The environmentally sound turf management program for tournament-tough greens from AminOrganiX; the leader in sustainable solutions for growth.

Golfers will tell you the game gets serious on the *green*. That's why the AminOrganiX Tournament Greens Program is designed to ensure greens, collars and approaches remain in high-quality playing condition all season long. AminOrganiX is also a great way to establish new greens capable of enduring the toughest play. We help build beautiful, tournament-tough surfaces golfers at every skill-level will notice and take seriously from the ground up.

FOUNDATION PROGRAM

Tournament-quality greens need a good start. Our 9-3-7 is formulated to establish a strong base - helping greens handle heavy wear and climactic stress that often causes damage. The key is seven sources of nitrogen, phosphorus and potassium providing season-long nutrition. 9-3-7 is a high potassium diet for maximum root growth with supplemental calcium and magnesium for stiffer, more resilient playing surfaces.

FULL NUTRITION PROGRAM

Feeding bacteria, mycorrhizae and other beneficial microorganisms is key to nutrient utilization. 9-3-7 enhances this symbiotic relationship in plants while attracting and feeding billions of CFU's in beneficial microorganisms and mycorrhizae, increasing root mass and strengthening the turf throughout the growing season. AminOrganiX - The tough turf solution.

IT'S ALL ABOUT THE LABEL

Guaranteed Analysis

Total Nitrogen(N)	9.00%
9.00% Water Insoluble Nitrogen*	
Available Phosphate (P ₂ O ₅)	3.00%
Soluble Potash (K ₂ O)	7.00%
Calcium (Ca)	2.80%
Total Magnesium (Mg)	0.60%
0.60% Water Soluble Magnesium	
Sulfur (S)	4.10%
3.40% Combined Sulfur(S)	
0.70% Free Sulfur(S)	
Boron (B)	0.02%
Cobalt (Co)	0.0005%

Zinc (Zn)	0.10%

Ingredients

Feather meal, poultry meal, wheat middlings, soybean meal, corn gluten meal, alfalfa meal, molasses, sulphate of potash, dolomitic limestone, elemental sulfur, cobalt sulfate, iron sulfate, manganese sulfate, zinc sulfate, sodium borate, sodium molybdate.

*9.0% slowly available Nitrogen from feather meal, wheat middlings, soybean meal, alfalfa meal, corn gluten meal, molasses.

NO MANURES, NO FILLERS, FEED GRADE INGREDIENTS FOR MAXIMUM SAFETY

AminOrganiX and our field specialists are committed to providing environmentally responsible products to help keep golf course greens healthy and safe.

We specialize in Integrated Turf Management, the scientific approach to nutritional product selection that stimulates the natural biological processes in soil to help you produce durable, verdant playing surfaces from root to blade. Healthy turf is better able to resist disease, forces out weeds and produces the characteristics you require for optimum, consistent playing conditions golfers will see and experience.

FORMULATED TO CONTINUOUSLY FEED FOR MONTHS

Residual nitrogen in the soil from seasonal feeding, and the environmental nitrogen provided by mulched grass clippings, exhaust emissions, microorganisms, root growth, worm castings, lightning, and other sources.

PROFESSIONAL TURF MANAGEMENT

Our experienced, expert staff and regional field specialists are here to help. Learn more about our products and how they help you grow healthier turf without harming the environment.
