

The environmentally sound landscape management program for golf course quality turf from AminOrganix, the leader in sustainable solutions for growth.

Ask any landscape professional. Clients want their lawn to look just like a golf course. That's what 9-3-7 is, golf course quality organic fertilizer used by golf superintendents. Aminorganix is also a great way to establish new lawns that will endure the toughest play by children and pets. We help build beautiful golf course quality lawns any homeowners or business owner will appreciate because we build it from ground up.

CONTINUOUS FEEDING PROGRAM

Aminorganix feeds the lawn continuously, formulated with seven nitrogen sources, seven phosphorus and seven potassium sources to provide feeding that can last for more than three months. Calcium, sulfur and essential micro and macro ingredients enhance performance for optimum growth. 9-3-7 is organic and it stays in the root zone longer than synthetics using its unique cation and thixotropic properties to provide nutrients uniformly with irrigation.

FULL NUTRITION PROGRAM

Feeding the bacteria, mycorrhizae and other beneficial microorganisms is key to nutrient utilization. 9-3-7 enhances the symbiotic relationship with the plant while attracting and feeding billions of CFU's of beneficial microorganisms and mycorrhizae, increasing root mass and strengthening the turf throughout the growing season.
