

The environmentally sound turf management program for tournament-tough greens from AminOrganix, the leader in sustainable solutions for growth.

Ask any golfer where the game gets serious, and he will tell you it's the *green*. That's why the Aminorganix Tournament Greens Program is designed to ensure greens, collars and approaches remain in quality playing condition all season long. Aminorganix is also a great way to establish new greens that will endure the toughest play. We help build beautifully playable, tournament-tough surfaces any golfer will take seriously from the ground up.

FOUNDATION PROGRAM

Any tournament-quality green needs a good start. Our 9-3-7 is formulated to establish a strong base which permits greens to handle heavy wear and climactic stress that often cause damage. The key is seven different sources of N, P, and K, that provide nutrition for months. 9-3-7 is a high potassium diet, for maximum root growth with supplemental calcium and magnesium for stiffer, more resilient turf.

FULL NUTRITION PROGRAM

Feeding the bacteria, mycorrhizae and other beneficial microorganisms is key to nutrient utilization. 9-3-7 enhances the symbiotic relationship with the plant while attracting and feeding billions of CFU's of beneficial microorganisms and mycorrhizae, increasing root mass and strengthening the turf throughout the growing season.

IT'S ALL ABOUT THE LABEL

Ingredients

Feather meal, poultry meal, wheat middlings, soybean meal, corn gluten meal, alfalfa meal, molasses, sulphate of potash, dolomitic limestone, elemental sulfur, cobalt sulfate, iron sulfate, manganese sulfate, zinc sulfate, sodium borate, sodium molybdate. *9.0% slowly available Nitrogen from feather meal, wheat middlings, soybean meal, alfalfa meal, corn gluten meal, molasses.

NO MANURES, NO FILLERS, FEED GRADE INGREDIENTS FOR MAXIMUM SAFETY

Aminorganix and every one of our field specialists is committed to providing environmentally responsible products which will help keep the golf course green, healthy and safe.

We specialize in Integrated Turf Management, the scientific approach to nutritional product selection to stimulate the natural biological processes in your soil to help you produce a healthy, durable playing surface. Healthy turf will be better able to resist disease, force out weeds and produce the characteristics you require for optimum course playing conditions.

FORMULATED TO CONTINUOUSLY FEED FOR MONTHS

Residual nitrogen in the soil from seasonal feeding, and the environmental nitrogen provided by mulched grass clippings, exhaust emissions, microorganisms, root growth, worm castings, lightning, and other sources.

PROFESSIONAL TURF MANAGEMENT

Our experienced and expert staff and our regional field specialists are here to help. Learn more about our products and how they help you grow healthier turf, from the up, without harming the environment.
