

The environmentally sound landscape management program for golf course quality turf from AminOrganiX; the leader in sustainable solutions for growth.

Landscape professionals know their clients want a lawn that looks like a golf course. AminOrganiX 9-3-7 is golf-course quality organic fertilizer used by golf superintendents. It is also a great way to establish new lawns that can endure the toughest play by children and pets. We help build beautiful lawns homeowners and businesses will see and appreciate from the ground up.

CONTINUOUS FEEDING PROGRAM

AminOrganiX feeds lawns continuously. Formulated with seven nitrogen sources, seven phosphorus and seven potassium sources to provide turf nutrition that can last more than three months. Calcium, sulfur and essential micro and macro ingredients enhance performance for optimum growth. Using its unique cation and thixotropic properties, 9-3-7 is organic and stays in the root zone longer than synthetics to provide uniform nutrients with irrigation.

FULL NUTRITION PROGRAM

Feeding bacteria, mycorrhizae and other beneficial microorganisms is key to nutrient utilization. 9-3-7 enhances the symbiotic relationship with the plant while attracting and feeding billions of CFU's (Colony Forming Units). These beneficial microorganisms and mycorrhizae increase root mass and strengthen plants throughout the growing cycle. AminOrganiX - The tough turf solution.
